Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

This communication is responsive to Amendment E, Filed 02/27/04.

Claims 1-20 are pending in this application. In the Amendment E, claims 1, 11, 13, and 17 were amended. Allowability of claim 11 is withdrawn.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bates et al. ("Bates", U.S. Pat. No. 5,777,616) in view of Hirose (U.S. 5,745,112).

Bates teaches an information processing apparatus comprising: a pointing device, a display unit displaying a plurality of icons, a detection unit detecting a predetermined operation performed on a first icon which has been dragged to a second icon and moved when positioned at said second icon, said first icon being displayed on said display unit and moved with movement of said pointing device, said second icon including a group of icons associated with said processing condition (Figs. 4B and 5; *icons: 114, 150 and icons: 114 and 160*; Col. 2, lines 20-26; Col. 7, lines 23-25 and lines 42-56; Col. 8, lines 1-9; *The first icon (114) is moved when position at said second icon (150 or 160) in order for a user to select a particular region among the plurality of regions of the second icon. In response to such movement, the GUI indicates to*

the user that a function associated with a particular region can or cannot be performed on the first icon (the function that can be performed by the indicated region is specified by text displayed beneath the first icon. A NOT symbol 172 of fig. 5 is displayed over the first icon to indicate that the first icon cannot be performed by the function of the indicated region.)) Bates

does not teach a condition update unit updating a processing condition in information processing based on the detection by said detection unit, said condition update unit updating an item common to a processing condition all together that is associated with said group of icons.

However, Hirose teaches a condition update unit updating a processing condition in information processing based on the detection by said detection unit, said condition update unit updating an item common to a processing condition all together that is associated with said group of icons

(Figs 13 and 14; Col. 6, lines 44 – 56). Accordingly, it would have been obvious to one of ordinary skill in the art at the time of the invention to include a condition update unit as taught by Hirose in the invention of Bates in order to display only relevant icons for information processing based on dragging operation done on another icon.

Allowable Subject Matter

Claims 1-10, and 12-20 are allowed.

The prior art either alone or in combination doesn't teach the limitation of a detection unit detecting a predetermined operation performed on a first icon which has been dragged to a second icon and moved when positioned at said second icon wherein said operation is a change of direction of movement performed on the first icon, said first icon displayed on said display unit and moved with movement of said pointing device and a condition update unit changing a

processing condition of the information processing, represented by the second icon, to be performed on said first icon based on the detection of the operation performed on the first icon in combination with the other claimed features.

Response to Arguments

Applicant's arguments regarding claim 11 have been fully considered but they are not persuasive. The examiner believes that Bates and Hirose's references read on the claim language as expressed in the above rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Dutta et al. (U.S. Pat. No. 6,717,600) disclosed proximity selection of selectable item in a graphical user interface.
